U.S. Patent and Trademark Office PTOL-303 (Rev. 08-06)

Continuation of 11. does NOT place the application in condition for allowance because: Applicant has ciried that the references of record rail to disclose essential elements of claims 1, 11, 16, and 20. Namely Applicant has argued that the Examinents of claims 1, 11, 16, and 20. Namely Applicant has argued that the Examinents of the area to what comprises a "probe housing" "connector housing", and the arrangement of parts within the system. Portability and separatability are also argued. Regarding claim 1, Leavitt et al disclose an ultrasound probe which can connect on enements, and an AD converter between the transducer (202 and the connection (14.6), 6), as well as a cable (electrical connection) which connects the transducer to an AD converter. Additionally, the AD converter is spaced from the transducer within the housing. The processing system (regarding claim 1) at least includes part of a receive beamformer, and the other end of a connection element which is electrically connectable to the transucer assembly. A subbeamformer is further included within the transducer connector housing separated from the transducer and used for signal processing (via compression)/beamformers.
